

DodoDesk

Getting Started Guide

Everything your IT team needs to be up and running in under 30 minutes.

Welcome to DodoDesk

DodoDesk is a powerful, affordable ITSM platform that gives your IT team everything they need, without the complexity or the price tag of legacy tools. This guide walks you through everything from your first login to handling your first ticket, in under 30 minutes.

What DodoDesk helps you do:

■ Ticket Management

Log, assign, track and resolve IT incidents and service requests

■ Knowledge Base

Build a self-service library so users find answers themselves

■ Asset Management

Track laptops, software, network gear and more

■ Change Requests

Manage change approvals with risk scoring and rollback plans

■ Reports & SLA

Monitor team performance and enforce response time targets

■ Automation

Auto-assign, tag and escalate tickets based on rules

■ Service Catalog

Let users request standard IT services with one click

Step 1 — Log In

Visit <https://dododesk.dodobay.com> and sign in with the credentials sent to you by your IT admin. If you signed up directly, use the email and password you registered with.

- Forgot your password? Click "Forgot password" on the login screen.
- Your admin may have configured SSO — look for the "Sign in with SSO" button.
- Enable MFA from Settings > Security for extra protection.

Step 2 — Understand the Dashboard

After login you land on the Dashboard. It shows your team's live metrics:

Metric	What it means
Open Tickets	Tickets waiting to be resolved
SLA At Risk	Tickets close to breaching their deadline
Avg Resolution Time	How fast your team closes tickets on average
CSAT Score	Customer satisfaction from resolved tickets
My Assigned	Tickets assigned specifically to you

Step 3 — Create Your First Ticket

Click **+ New Ticket** in the sidebar or press **Ctrl+K** to open global search.

- 1 Choose ticket type**
Incident (something broken) · Service Request (need something) · Change Request (planned change)
- 2 Fill in the title**
Be specific — "Outlook won't open on Sarah's laptop" beats "Email broken"
- 3 Set priority**
Critical > High > Medium > Low. SLA timers start immediately.
- 4 Assign to an agent**
Or leave unassigned for the team to pick up
- 5 Add description**
Include error messages, screenshots, steps to reproduce
- 6 Submit**
The requester gets a confirmation email automatically

Step 4 — The Ticket Lifecycle

Every ticket moves through these statuses:

Status	Meaning	Who acts
Open	Newly created, not yet assigned	Team lead / dispatcher
In Progress	Agent is actively working on it	Assigned agent
Pending User	Waiting for info from the requester	Requester
Pending Vendor	Waiting on a third-party supplier	Assigned agent
Resolved	Work done — CSAT email sent	Requester confirms
Closed	Confirmed resolved	Auto or agent

Step 5 — SLA & Escalation

SLA targets define how quickly your team must respond and resolve tickets. DodoDesk tracks these automatically and alerts you before a breach occurs.

Priority	Default Response	Default Resolution
Critical	1 hour	4 hours
High	4 hours	8 hours
Medium	8 hours	24 hours
Low	24 hours	72 hours

Tip: Go to Settings > SLA & Escalation to customise these targets and set up escalation rules that auto-reassign idle tickets.

Step 6 — Knowledge Base

The Knowledge Base lets users find answers without raising a ticket. Every article you write reduces repeat tickets.

1. Go to Knowledge Base in the sidebar
2. Click New Article
3. Write the title, body, and add a category
4. Set visibility: Internal (agents only) or Public (all users)
5. Publish — users can now find it via search or the portal

Tip: Link a KB article when resolving a ticket — DodoDesk will suggest relevant articles automatically.

Step 7 — Configure Your Settings

Admins should complete these settings before inviting the team:

Setting	Where to find it	Why it matters
Company branding	Settings > Organisation	Your logo and name in all emails
Email (SMTP)	Settings > Email & Integrations	Required for ticket notifications
SLA targets	Settings > SLA & Escalation	Sets response time commitments
Business hours	Settings > SLA & Escalation	SLA timers pause outside hours
Notification prefs	Settings > Notifications	Control which events alert you
Users & roles	Settings > Users	Invite agents and set permissions
Ticket templates	Settings > Ticket Templates	Speed up common request types
Automation rules	Settings > Automation Rules	Auto-assign and tag tickets

User Roles Explained

■ Requester	Can create tickets, view their own tickets, use the service catalog and KB
■ Agent	Can manage all tickets, comment, resolve, and use macros
■ Admin	Full access including settings, user management, SLA, and reports
■ Platform Admin	MSP-level access across multiple tenant organisations

Keyboard Shortcuts

Shortcut	Action
Ctrl + K	Open global search
Ctrl + N	New ticket (on ticket list page)
Esc	Close modal or search
Tab	Navigate form fields

Pro Tips

Use Macros	Settings > Macros lets you create one-click action sequences — e.g. "Close & tag resolved" applies status + tag + comment in one click.
Use Canned Responses	Pre-write common replies and insert them into tickets with one click.
Set up Slack/Teams	Settings > Email & Integrations > Webhooks sends ticket events to your channel in real time.
Use the Service Catalog	List standard IT services so users can self-serve instead of emailing you.
Run Reports Weekly	Reports > Agent Workload shows who is overloaded and who has capacity.
DodoBot AI	Click the robot icon to ask DodoBot questions about your tickets, KB, and asset data.
